

Routine Floor Cleaning Using Fast-1-2-3 EFP Detergent

- Pick up any large debris and dust mop floor.
- Make note of any areas that may require additional attention for cleaning.
- Place wet floor signage around area being cleaned.

When filling mop buckets, autoscrubbers, and spray bottles, mix **Fast-1-2-3 EFP** with COLD water. We strongly recommend using an automatic proportioning device for simple and precise dilutions. If using a hand measuring device, DO NOT add more concentrate. Always dilute per label instructions.

Autoscrubbing a Floor

For routine floor washing, use either a 500 grit Lite Scrub Brush or a white scrub pad.

Fill the autoscrubber using an automatic proportioning device with **Fast-1-2-3 EFP** detergent and COLD water. Use the autoscrubber to spread, scrub, and vacuum up the **Fast-1-2-3 EFP** dirty solution. If the autoscrubber has adjustable head-pressure, use the weight of scrubber head only, do not use excessive pressure.

Once every 1–2 weeks

Fill a mop bucket with a **Fast-1-2-3 EFP** solution and wet mop all corners and edges. Autoscrub the entire floor area after wet mopping.

Special Note: Either a pad or scrub brush may be used on most floors. We strongly recommend a grit-impregnated brush for grouted and/or uneven floors. Contact a Gabriel technical advisor as often as there is a need to do so.

Wet Mopping with Mop, Bucket, and Wringer

When autoscrubber is not available or will not fit in the area to be cleaned.

For best mopping results, use a Gabriel **Primo-Pro** Wet Mop using a mop wringer that will hold and release a maximum amount of liquid compared to standard wet mops.

Using COLD water and **Fast-1-2-3 EFP** detergent concentrate through an automatic proportioning device, fill the mop bucket.

- Liberally spread **Fast-1-2-3 EFP** solution onto the floor.
Do not allow solution to dry before picking up.
- Vacuum up dirty solution or pick-up with a wet mop.
- Let floor dry before opening to traffic.

Special Note: **Fast-1-2-3 EFP** is a super-concentrated, high-performance cold-water detergent that out-performs other detergents without having to use concentrate more than what is stated on the container label.
